SlipNOT® Slip Resistant Stainless Steel Plates Protect Expansion Joints on Parking Deck in Honolulu, Hawaii

Location: Honolulu, HI

Industry: Infrastructure

Number of Employees: 25

Honolulu's nickname is "The Gathering Place", which fits a city in which hundreds of visitors from around the world flock to the numerous beaches and attractions. This constant flow of visitors means safety is a top priority to Honolulu businesses. Walking surfaces are a concern as Honolulu is exposed to many of nature's different elements.

SlipNOT® was contacted by a fabricator who has been in the contracting business since 1987, to help with a parking deck project for a commercial client. The fabricator wanted to purchase stainless steel slip resistant plates to fit over existing expansion joints in the parking deck.

The Situation:

A fabricator from Honolulu was recently contacted by a customer to seek a slip resistant solution for existing expansion joints on a parking deck that were becoming slick from oil and water. The customer required expansion joint cover plates that would be durable, corrosion resistant and able to endure installation in outdoor environments. The cover plates also needed to support high vehicle and pedestrian traffic. The fabricator contacted SlipNOT® for an anti-slip solution.

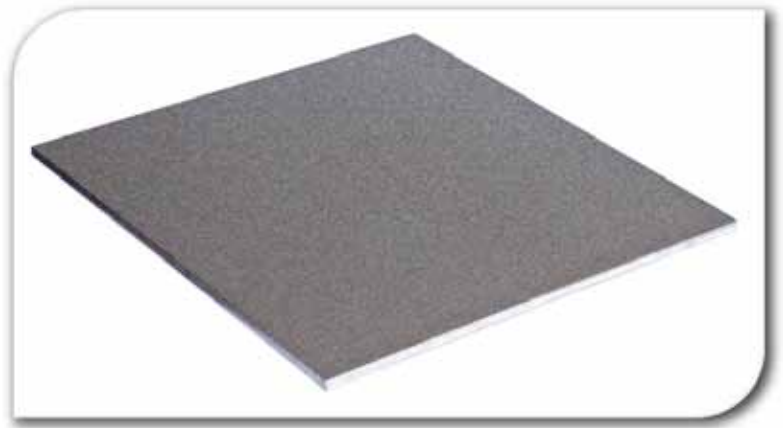

SlipNOT® Project Summary

- 1/8" thick 12" x 84" stainless steel plates
- The stainless steel plates easily fit over the existing expansion joint plates to help provide the parking deck with a slip resistant solution that can withstand weather elements, oil and heavy foot traffic.

The Solution:

SlipNOT® provided the client with 1/8" thick 12" x 84" stainless steel plates for their installation. The fabricator waterproofed the expansion joints and then installed the stainless steel plates over them, which allowed for slip resistance as well as protection of the expansion joints. **SlipNOT®** stainless steel has a file hard surface and is also corrosion resistant, which will stand up to the Hawaiian environment.

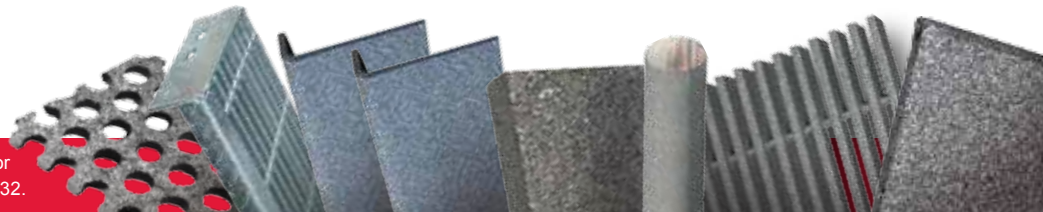

The Impact:

SlipNOT® provided the most effective way for the customer to keep the expansion joints protected, while maintaining a slip resistant surface. The stainless steel Grip Plate® has proven to be durable and long lasting in tough and exposed environments. The president of the company stated "The plates are working good. Your product is a great one."
