### Punched Plank Replaces Deteriorating Stairs at Denver International Airport

Company: Denver International Airport

Location: Denver, CO

Industry: Aerospace

Website: [www.flydenver.com](http://www.flydenver.com)

*Denver International Airport (DIA) in Denver, CO is the only major airport built in the United States in the last 25 years. Over 50 million passengers pass through the gates of the airport each year. Built in 1995, the airport boasts a roof made of teflon glass that is as thin as a credit card. During construction artists worked with architects to integrate art into a public space, becoming one of the very first public spaces to do so.*

#### **The Situation:**

The DIA had stairways on their outdoor parking garage where puddles would build up, causing rust spots to form in various places. The DIA contacted a contractor to provide a slip resistant solution that could withstand the elements. The contractor then turned to **SlipNOT®** to help provide the solution the Denver International Airport needed.

#### **SlipNOT® Project Summary**

- Grade 2 aluminum punched plank
- **SlipNOT®** applied their slip resistant aluminum coating to various pieces of punched plank, creating a high traction surface for passengers and employees.

### **The Solution:**

**SlipNOT®** was sent various pieces of punched plank to be coated with the slip resistant aluminum surface. The plank was cut into sizes to easily fit into the existing stairways in the parking garage. Since the area is outdoors, it is exposed to various elements year round. The punched plank allows for light, water and other debris to fall through and retains traction to keep pedestrians and workers on their feet.

**SlipNOT®** punched plank can be ordered in stock sizes or can be custom cut to fit each particular application. Punched plank can be ordered through **SlipNOT®** or existing material can be shipped to our facility and coated. Aluminum naturally forms an oxide that protects for rust and corrosion in all types of environments. With a high strength-to-weight ratio, aluminum plank is lightweight, yet can withstand heavy usage.

### **The Impact:**

For an airport, safety and security is essential. **SlipNOT®** provided the best long term solution to the deteriorating, slick stairways that occurred at the DIA multi-story parking garage. In any type of conditions, passengers and workers can count on **SlipNOT®** punched plank to keep them on their feet.
