New York Fire Department Utilized SlipNOT® Stainless Steel Stair Treads

Company: New York Fire Department

Location: Long Island, NY

Industry: Government

Number of Employees: 37,838

Website: www.nyc.gov

The New York Fire Department (FDNY) recently renovated Engine Company 259's station located on Long Island, New York. An anti-slip flooring material was needed for stairs and platforms throughout the facility. The FDNY sought a slip resistant material because snow and mud could be tracked in from the outside creating slick flooring. When firefighters are moving quickly to respond to emergencies, the slick flooring created a safety hazard. The FDNY sought a material that would help provide safety to firefighters at the facility.

The Situation:

FDNY is known for its unwavering bravery, core values, and remarkable service to the citizens of New York, NY. Engine Company 259 was designed for efficiency by an architectural firm. The three story fire station was in need of slip resistant stairs and platforms throughout the facility. When there is an emergency the firefighters and other personnel needed traction when running up or down the stairs. Often times water, snow and other liquids are dragged into the department and can cause a slippery situation. Safety is a top priority for the FDNY, whether it is inside the station or out in the field.

SlipNOT® Project Summary

- Grade 2 stainless steel plate stair treads
- The SlipNOT® stainless steel plate stair treads are aesthetically pleasing and were easily incorporated in the renovations to the facility. The stainless steel material provides slip resistance to the stairs and platforms at the facility to help ensure firefighters' safety.

The Solution:

SlipNOT® provided custom Grade 2 stainless steel plate stair treads that were fabricated to very detailed prints. **SlipNOT®** was able to meet the thorough requirements of the project and supplied stair treads in various sizes and shapes for various areas throughout the facility.

The stainless steel plate stair treads were the optimal solution for the application because they provided the traction and safety needed for the firefighters during emergencies as well as the aesthetically pleasing look the architect was seeking for the project. **SlipNOT®** stainless steel stair treads can also be easily cleaned which is ideal when dealing with snow, dirt, ash and other elements from the firefighters' equipment on the stair treads.

The Impact:

SlipNOT® stainless steel stairs provide a slip resistant working / walking surface for firefighters, paramedics and other personnel when accessing different areas. Timing is everything in the emergency field, every second counts, traction on stairs and other walking surfaces is critical.
